

A Guide to Molecular Mechanics and Quantum Chemical Calculations

Warren J. Hehre

Wavefunction, Inc.
18401 Von Karman Ave., Suite 370
Irvine, CA 92612

Table of Contents

Chapter 1	Potential Energy Surfaces	1
	Introduction	1
	Potential Energy Surfaces and Geometry	6
	Potential Energy Surfaces and Thermodynamics	8
	Potential Energy Surfaces and Kinetics	10
	Thermodynamic vs. Kinetic Control of Chemical Reactions	12
	Potential Energy Surfaces and Mechanism	15
Section I	Theoretical Models	17
Chapter 2	Quantum Chemical Models	21
	Theoretical Models and Theoretical Model Chemistry	21
	Schrödinger Equation	22
	Born-Oppenheimer Approximation	23
	Hartree-Fock Approximation	24
	LCAO Approximation	25
	Roothaan-Hall Equations	26
	Correlated Models	28
	Kohn-Sham Equations and Density Functional Models	30
	Configuration Interaction Models	33
	Møller-Plesset Models	35
	Models for Open-Shell Molecules	38
	Models for Electronic Excited States	39
	Gaussian Basis Sets	40
	STO-3G Minimal Basis Set	40
	3-21G, 6-31G and 6-311G Split-Valence Basis Sets	42
	6-31G*, 6-31G**, 6-311G* and 6-311G** Polarization Basis Sets	43
	3-21G(*) Basis Set	44

	cc-pVDZ, cc-pVTZ and cc-pVQZ Basis Sets ..	45
	Basis Sets Incorporating Diffuse Functions	46
	Pseudopotentials	46
	Semi-Empirical Models	48
	Molecules in Solution	49
	Cramer/Truhlar Models for Aqueous Solvation	50
	Nomenclature	51
	References	53
Chapter 3	Molecular Mechanics Models	55
	Introduction	55
	SYBYL and MMFF Force Fields	58
	Limitations of Molecular Mechanics Models.....	58
	References	60
Chapter 4	Graphical Models	61
	Introduction	61
	Molecular Orbitals	62
	Electron Density	66
	Spin Density	70
	Electrostatic Potential	72
	Polarization Potential	74
	Local Ionization Potential	74
	Property Maps	75
	Electrostatic Potential Map	76
	LUMO Map	81
	Local Ionization Potential Map	83
	Spin Density Map	84
	Animations	85
	Choice of Quantum Chemical Model	86
	References	86
Section II	Choosing a Model	87
<hr/>		
Chapter 5	Equilibrium Geometries	89
	Introduction	89
	Main-Group Hydrides	91
	Hydrocarbons	99

Molecules with Heteroatoms	103
Larger Molecules	108
Hypervalent Molecules	126
Molecules with Heavy Main-Group Elements ...	131
Molecules with Transition Metals	134
Transition-Metal Inorganic Compounds	140
Transition-Metal Coordination Compounds...	141
Transition-Metal Organometallics	148
Bimetallic Carbonyls	149
Organometallics with Second and Third-Row Transition Metals	153
Bond Angles Involving Transition-Metal Centers	155
Reactive Intermediates	161
Carbocations	161
Anions	166
Carbenes and Related Compounds	169
Radicals	172
Hydrogen-Bonded Complexes	176
Geometries of Excited States	180
Structures of Molecules in Solution	181
Pitfalls	182
References	182
Chapter 6	
Reaction Energies	183
Introduction	183
Homolytic Bond Dissociation Reactions	186
Singlet-Triplet Separation in Methylene	190
Heterolytic Bond Dissociation Reactions	192
Absolute Basicities	193
Absolute Acidities	193
Absolute Lithium Cation Affinities	198
Hydrogenation Reactions	202
Reactions Relating Multiple and Single Bonds ...	205
Structural Isomerization	206
<i>Isodesmic</i> Reactions	221
Bond Separation Reactions	222

	Relative Bond Dissociation Energies	230
	Relative Hydrogenation Energies	233
	Relative Acidities and Basicities	237
	Reaction Energies in Solution	246
	Pitfalls	252
	References	252
Chapter 7	Vibrational Frequencies and Thermodynamic Quantities	253
	Introduction	253
	Diatomic Molecules	255
	Main-Group Hydrides	259
	CH ₃ X Molecules	261
	Characteristic Frequencies	263
	Infrared and Raman Intensities	267
	Thermodynamic Quantities	267
	Entropy	267
	Correction for Non-Zero Temperature	268
	Correction for Zero-Point Vibrational Energy	269
	Pitfalls	269
	References	269
Chapter 8	Equilibrium Conformations	271
	Introduction	271
	Conformational Energy Differences in Acyclic Molecules	273
	Conformational Energy Differences in Cyclic Molecules	278
	Barriers to Rotation and Inversion	282
	Ring Inversion in Cyclohexane	289
	Pitfalls	291
	References	292
Chapter 9	Transition-State Geometries and Activation Energies	293
	Introduction	293
	Transition-State Geometries	294
	Absolute Activation Energies	299

	Relative Activation Energies	304
	Solvent Effects on Activation Energies	310
	Pitfalls	312
	References	312
Chapter 10	Dipole Moments	313
	Introduction	313
	Diatomic and Small Polyatomic Molecules	314
	Hydrocarbons	323
	Molecules with Heteroatoms	323
	Hypervalent Molecules	334
	Dipole Moments for Flexible Molecules	337
	References	341
Chapter 11	Overview of Performance and Cost	343
	Introduction	343
	Computation Times	343
	Summary	346
	Recommendations	349
Section III	Doing Calculations.....	351
<hr/>		
Chapter 12	Obtaining and Using Equilibrium Geometries	353
	Introduction	353
	Obtaining Equilibrium Geometries	355
	Verifying Calculated Equilibrium Geometries ...	355
	Using “Approximate” Equilibrium Geometries to Calculate Thermochemistry	357
	Using Localized MP2 Models to Calculate Thermochemistry	375
	Using “Approximate” Equilibrium Geometries to Calculate Molecular Properties	378
	References	381
Chapter 13	Using Energies for Thermochemical and Kinetic Comparisons	383
	Introduction	383

	Calculating Heats of Formation from Bond Separation Reactions	385
	References	387
Chapter 14	Dealing with Flexible Molecules	393
	Introduction	393
	Identifying the “Important” Conformer.....	393
	Locating the Lowest-Energy Conformer	396
	Using “Approximate” Equilibrium Geometries to Calculate Conformational Energy Differences....	399
	Using Localized MP2 Models to Calculate Conformational Energy Differences	403
	Fitting Energy Functions for Bond Rotation	405
	References	407
Chapter 15	Obtaining and Using Transition-State Geometries.....	409
	Introduction	409
	What Do Transition States Look Like?	414
	Finding Transition States	415
	Verifying Calculated Transition-State Geometries.	419
	Using “Approximate” Transition-State Geometries to Calculate Activation Energies	421
	Using Localized MP2 Models to Calculate Activation Energies	430
	Reactions Without Transition States	432
Chapter 16	Obtaining and Interpreting Atomic Charges ..	433
	Introduction	433
	Why Can’t Atomic Charges be Determined Experimentally or Calculated Uniquely?	434
	Methods for Calculating Atomic Charges	435
	Population Analyses	436
	Fitting Schemes	437
	Which Charges are Best?.....	438
	Hartree-Fock vs. Correlated Charges	440
	Using Atomic Charges to Construct Empirical Energy Functions for Molecular Mechanics/	

	Molecular Dynamics Calculations	441
	References	442
Section IV	Case Studies	443
<hr/>		
Chapter 17	Stabilizing “Unstable” Molecules	445
	Introduction	445
	Favoring Dewar Benzene	445
	Making Stable Carbonyl Hydrates	448
	Stabilizing a Carbene: Sterics vs. Aromaticity ...	451
	Favoring a Singlet or a Triplet Carbene	453
	References	456
Chapter 18	Kinetically-Controlled Reactions	457
	Introduction	457
	Thermodynamic vs. Kinetic Control	458
	Rationalizing Product Distributions	461
	Anticipating Product Distributions	463
	Altering Product Distributions	465
	Improving Product Selectivity	468
	References	471
Chapter 19	Applications of Graphical Models	473
	Introduction	473
	Structure of Benzene in the Solid State	473
	Acidities of Carboxylic Acids	478
	Stereochemistry of Base-Induced Eliminations ..	481
	Stereochemistry of Carbonyl Additions	483
	References	487
Appendix A	Supplementary Data	489
Appendix B	Common Terms and Acronyms	753
Index		773
Index of Tables		787
Index of Figures		793
